PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building full-stack web applications. I've designed and delivered low-latency, working across both backend and frontend, with focus on React and frontend architecture. Strong foundation in competitive programming with hands-on experience in TypeScript, Python, and Rust.

EXPERIENCE

Seed Labs (Bluefin)

Aug 2025 – Present

Senior Software Engineer

Canada, Remote

- Redesigned an acquired DEX aggregator by introducing a reader/writer architecture with Redis, bringing infrastructure costs down from an estimated \$30–40K/month to about \$3K/month within 2 weeks.
- Iterated on Smart Order Routing across 5 versions, reducing P95 latency from 1.2s to 250ms and improving win rate against a leading competitor from 17% to over 60%.
- Integrated new AMM partners end-to-end, covering SDKs, APIs, and UI integration.
- Worked on the Bluefin Spot UI redesign using React and TypeScript.
- Contributed to a new project on Canton Network, building APIs to surface market maker quotes and enabling secure fund transfers.

Foundry (YC 24)

Mar 2025 – Aug 2025

Full Stack Engineer

US, Remote

- Created a Gmail simulation for browser-based AI agents, enabling the testing of email workflows such as reading threads, and sending emails in a controlled environment.
- Built a Playground page showcasing available simulated platforms (e.g., Gmail, Apollo, LinkedIn) so clients could preview the environments the AI agent would interact with.
- Created a centralized data warehouse to provide consistent datasets across simulated platforms (e.g., Gmail, LinkedIn, Apollo).
- Built Foundry's client-facing annotation platform from scratch, enabling creation, assignment, and execution of complex browser-based tasks.
- Developed evaluation and reviewer pages where clients could watch execution recordings and assess results against organization-specific criteria.

Qureos

Jan 2022 – Mar 2025

Senior Fullstack / Product Engineer

UAE, Remote

- Developed and shipped an AI-driven candidate screening system using React-based workflows, improving engagement by 25% in top-of-funnel acquisition.
- Spearheaded the development of an AI-powered job description generator, leading to an additional \$4,000 in annual revenue through white-labeling.
- Contributed to the product side of Qureos, collaborating with the customer success team to prioritize and implement client requests, and converting 3 clients to pay for quarterly subscriptions.
- Integrated Stripe to securely store multiple payment methods, processing over 50 transactions per month.

Breaktout Mentors

Sep 2022 – May 2024

USACO Mentor

US/Singapore, Remote

- Mentored high school students in USACO with a focus on algorithms and competitive problem solving.
- Helped two students progress from Bronze to Gold level through weekly sessions and personalized guidance.

Remotebase

Jan 2022 – Jun 2024

Software Engineer II

US, Remote

- Contributed as one of the first engineers on a client project, shaping core features and establishing early trust.
- Handled an average of 5 major features per month, with less than 10% issues found enabling faster development to production release cycle.
- Developed responsive web pages using TailwindCSS, enhancing cross-device user experience.
- Built and deployed a "For You" job recommendation algorithm, achieving a 7% CTR over 8 months.
- Integrated reCAPTCHA v3, reducing spam by 72% on public endpoints.
- Built a React-based admin portal for talent operations, enabling efficient CV reviews and reducing hiring process time by 60%.

Algorack

Jan 2020 – Dec 2021

Web Developer

Karachi, PK

- Developed complex D3 charts and custom SVG solutions, enhancing data visualization capabilities.
- Designed and built a short-term drone simulator using Three.js and Vue.js, incorporating mathematical models to educate children in programming.

PROJECTS

Wave.tickets

Jun 2024 – Oct 2024

- Developed an AI-powered SMS ticket booking system using NestJS, OpenAI, and LangChain, allowing users to book tickets seamlessly through text messages.
- Deployed the Wave.tickets AI server on AWS using command-line tools, handling infra setup end-to-end.

Ant Colony Optimization

Dec 2023 – Jan 2024

- Developed a 3D visualization of the Ant Colony Optimization algorithm on a 2D plane using Three.js.
- Simulated real-time ant movement and pheromone trails to demonstrate algorithm dynamics.

EDUCATION/CERTIFICATES

Mohammad Ali Jinnah University

Oct. 2017 – Aug 2021

Bachelor of Science in Computer Science

Karachi, PK

Hacker Cup 2021

Oct 2021

Facebook

ICPC Asia Topi Regional

Sep 2021

ICPC

Problem Solving (Advanced)

Sep 2020

Hackerrank

TECHNICAL SKILLS

Languages: Rust, TypeScript, JavaScript, Python, SQL

Frameworks/Libraries: React, Next.js, Node.js, Nest.js, TailwindCSS, D3.js, Three.js, LangChain

Infrastructure: Redis, Docker, Terraform, AWS, Sentry, GitHub Actions
